**Digital Info Security Company to be Featured on "Business & Beyond" Television Series**

*Westminster, CO, June 11, 2007*—Digital Info Security Company (DGIF) announced today that it has been selected to appear on "Business & Beyond," an innovative, educational television series geared towards business executives. DGIF will be featured in a segment on "Rising Stars in Preparing a Company for a Natural Disaster with Remote IT Locations."

The "Business & Beyond" program will air nationally on Fox News in addition to airing in top regional markets across the country. Filming for the segment will take place on site at DGIF's location in Westminster, CO, and will feature DGIF's state-of-the-art Data Center and office complex. James Clark, DGIF's Chairman & CEO, will be featured as a spokesperson and industry expert in the segment.

DGIF was chosen for the segment on natural disaster preparation because of its world-class IT solutions, specifically its RestoreRex remote backup solution. RestoreRex protects against business failure in the form of loss of critical information and productivity when servers or PCs crash in events such as natural disasters or power losses.

With RestoreRex, information is updated according to each business' customized, scheduled backup, and reports are automatically emailed with each backup. Retrievable from any place with Internet connection, information can be restored at any time from the remote Data Center. Customers have complete control over creating and managing their password and encryption keys to ensure security.

Using a remote solution such as RestoreRex ensures protection of information, unlike unreliable CD or tape backups that can be lost, corrupted, or destroyed along with computers and other hardware in a disaster area. Threats from unpredictable events such as fire, floods, natural disasters, theft, vandalism and terrorism are minimized by using a remote backup solution because client data is stored at an offsite location.
