

# A simple solution for file sharing and management

# DISC GroupStorage Secure Online File Sharing

## Access Your Files Anywhere, Anytime

DISC GroupStorage provides quick and easy access to your files from the office or while you're working remotely. All you need is an Internet connection.

## File Collaboration

DISC GroupStorage Online File Management is an effective and convenient tool for file management in the business workplace. DISC GroupStorage eliminates the confusion that often arises when multiple people are working on the same document.

With DISC GroupStorage, files are stored in one central location, providing access for multiple users.

## Easy and Secure File Distribution

Security is compromised when sending files through email, and file size is often limited. DISC GroupStorage provides a simple tool for file distribution. Instead of attaching cumbersome files to email messages, users are able to send files as links in an email. Users also have the option to log file access so that the sender can view when files are viewed and by whom.

## Controlled Access and Secure Transport

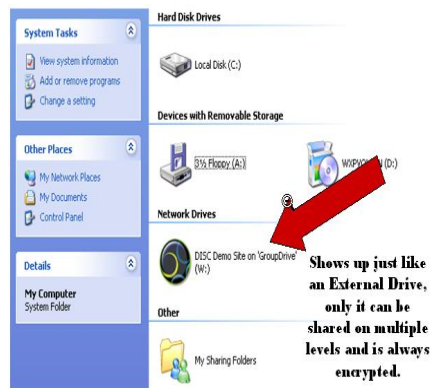

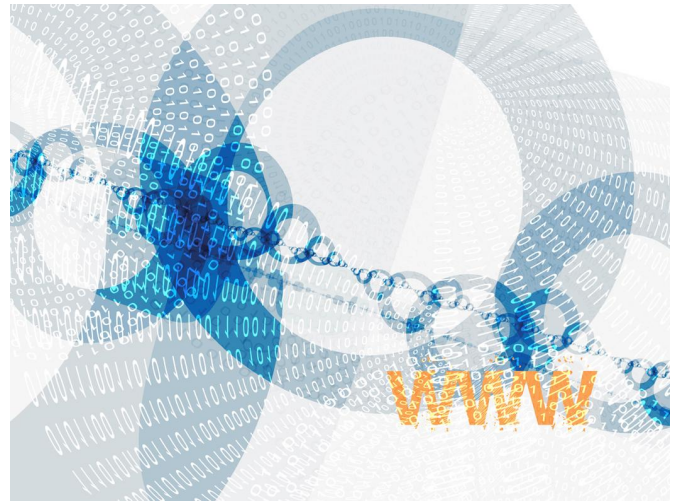

DISC GroupStorage allows users to specify different access levels for each file to ensure the highest level of security for important company data. For example, a user may only be allowed viewing permission versus editing permission, and a user may specify how many times a file can be viewed by other users. Additionally, DISC GroupStorage features encryption technology to protect files while in transit.

## Convenient and Cost Effective Storage

DISC GroupStorage is an economic alternative to purchasing additional hard drive space and managing additional servers and bandwidth. With no limit on the size of file that DISC GroupStorage is capable of uploading, you can conveniently and efficiently work with large files.

## Compatibility

DISC GroupStorage uses industry standard protocols to ensure compatibility with a client's existing infrastructure.

DISC GroupStorage Supports multiple client platforms

- Supports MS Windows NT, XP, 2008 and 2003
- Native Apple Macintosh support under OS/X
- Classic MacOS (8.1 and later) support through Goliath
- Compatible with Microsoft WebFolders
