

DISC is excited to offer a new hosted service: [DISC Secure Vault Manager](#)

DISC's hosted Secure Vault Manager service is a secure online web based management tool that protects a user or an organization against lost or forgotten passwords. It also allows the user to revoke access to confidential information if it is stored on a removable media device that has been lost or stolen. The password and its data access can be remotely cut-off if someone has the device or the content.

The enterprise version of the Secure Vault Manager service allows for enterprise administrators to remotely manage and audit employee and contractor access to protected information. This includes what machines and devices the content is stored on, what content has been protected, by whom, which employees and contractors have access to the information, and the type of operations they are performing with the information. A key issue in the current national recession is the theft of confidential data by recently laid off employees. The Secure Vault Manager service for enterprises allows administrators to audit this behavior, dynamically revoke access to protected devices and information that ex-employees still have access to, and perform full forensics investigations. Organizations can also establish and set their own policies for offline and out of network usage and access to protected business information.

HIGHLIGHTS:

- **Collaboration with ENCRYPTX:** DISC is an authorized reseller of ENCRYPTX
- Use ENCRYPTX product lines (SecurFlash® and DeviceDefender™) easily and not have to worry about managing them
- System wide tool for managing security throughout a company
- Manages encrypted removable devices, files, folders, emails, etc.
- Remote password recovery anytime, anywhere
- Dynamically revoke access for security
- Hosted solution is targeted for organizations that may not have the dedicated resources of an internal IT department to manage system-wide data access and security
- Businesses can purchase DISC's complete family products, including but not limited to PolicyBridge™, SecurFlash and DeviceDefender products and leave the management to the IT experts at DISC
